READING CLOUD

Bring the library to life with Reading Cloud

The library management system that goes the extra mile, providing a library experience that develops positive attitudes to reading.

part of ParentPayGroup

Maximise the potential of your school library and inspire a generation of readers with Reading Cloud

Reading Cloud is a live online reading community that supports literacy in schools, encourages independent learning, and helps drive parental engagement.

With its focus on promoting reading for pleasure across the school community, Reading Cloud helps to develop strong readers with a passion for lifelong learning.

Reading Cloud nurtures independent learning, research skills, and reading for pleasure among students at every age and reading level.

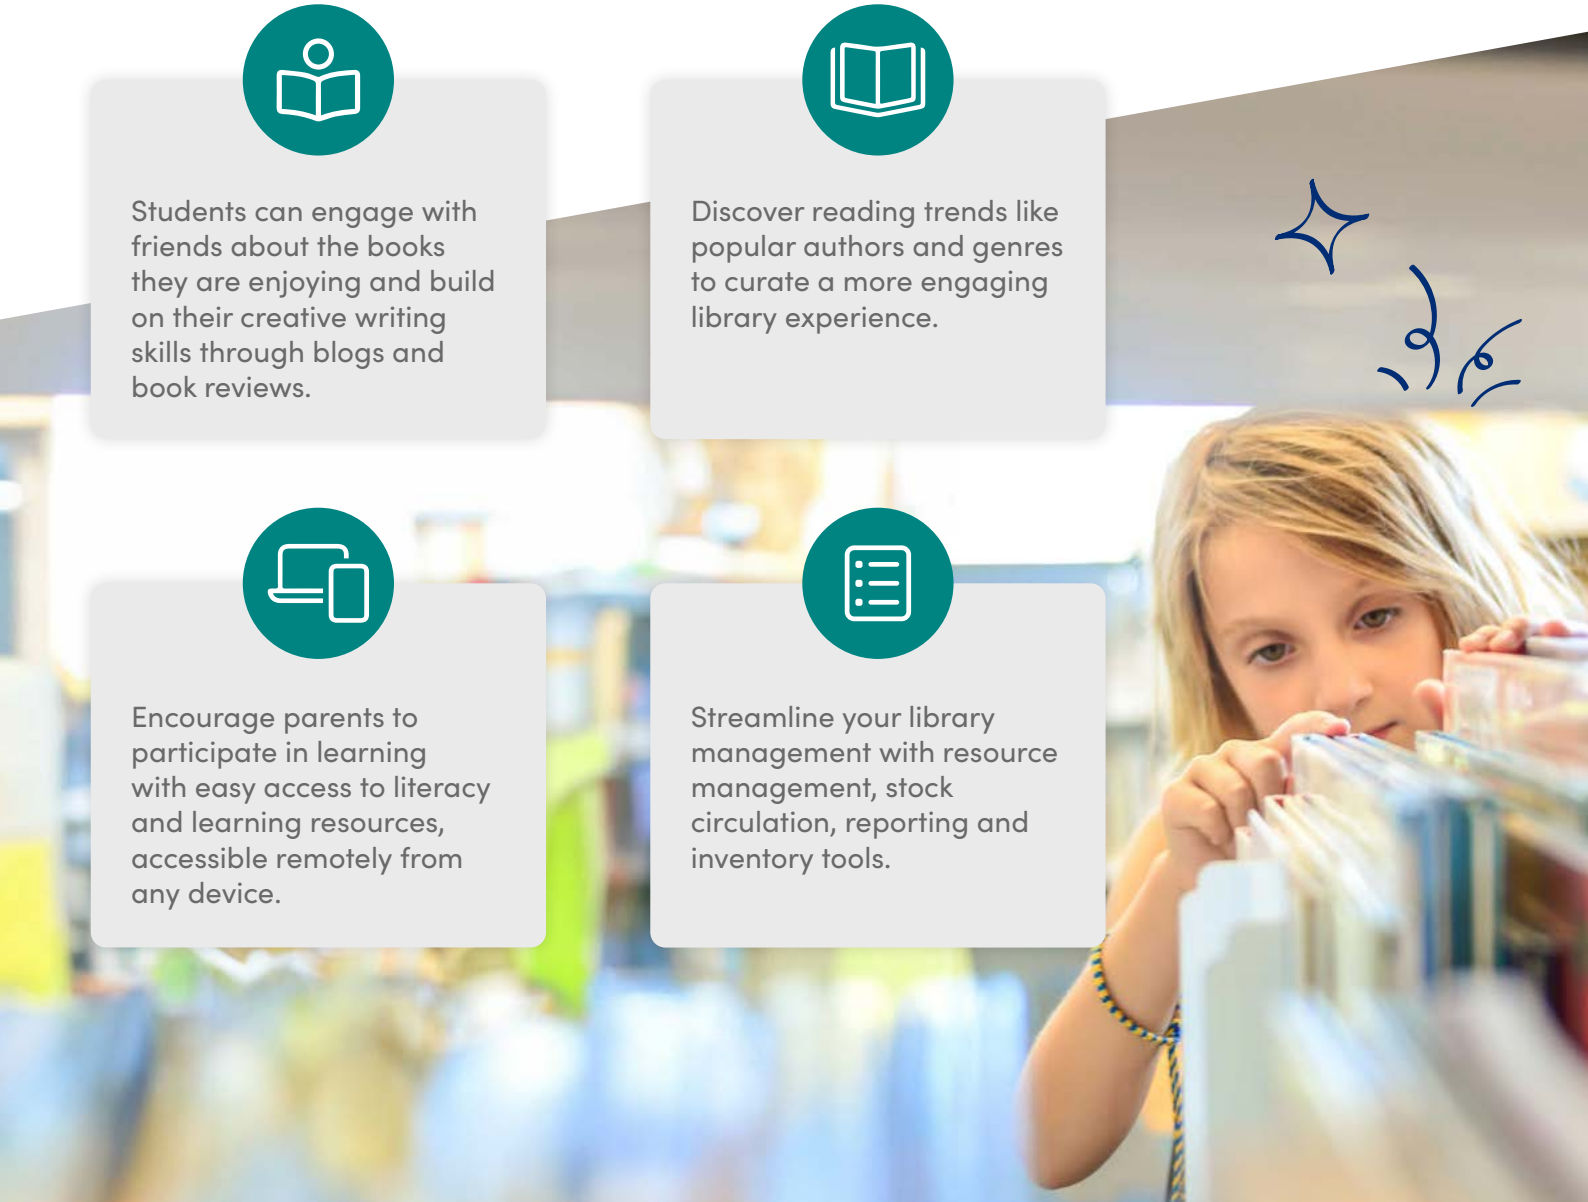
Benefits

Students can engage with friends about the books they are enjoying and build on their creative writing skills through blogs and book reviews.

Discover reading trends like popular authors and genres to curate a more engaging library experience.

Encourage parents to participate in learning with easy access to literacy and learning resources, accessible remotely from any device.

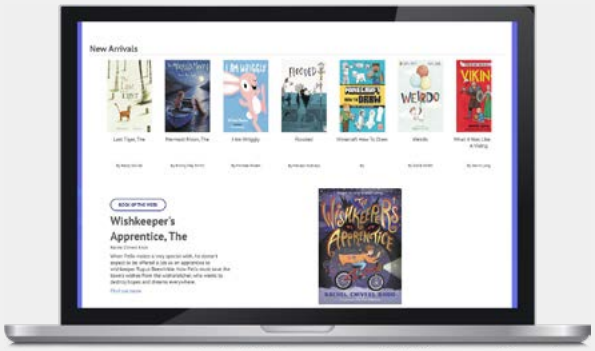
Streamline your library management with resource management, stock circulation, reporting and inventory tools.



Key features to improve your students' library experience

Customise your homepage

Promote academic and leisure time reading with a fully customisable library homepage that puts the library experience in your hands. Want to promote a particular reading list or draw students' attention to school based initiatives like World Book Day or Black History month? You can tailor your library homepage to the needs of your school and students.

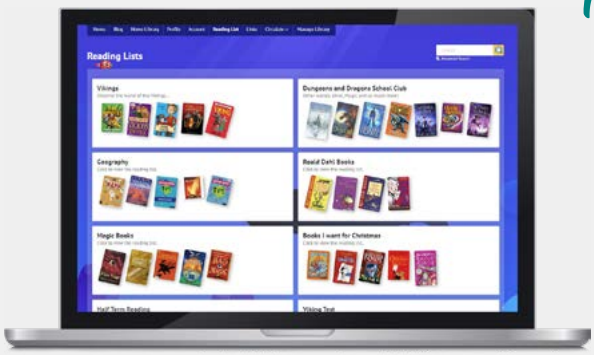


Mobile optimisation

Reading Cloud is fully optimised across mobile and tablet devices meaning your students and parents can access the platform from home. Reserve books, search the catalogue, write a review, or read eBooks; students can do all of this from wherever they are creating easy access to their literacy and learning resources promoting further engagement with the library outside of school.

Create targeted student reading lists

Promote reading recommendations based on different student needs or ties to the curricular reading lists by building targeted reading lists for groups of students. What's more, encourage students to build their own personalised reading lists based on their interests and reading tastes.



Develop creative writing skills with book reviews and blogs

Encourage students to deepen their understanding of the books they've read and share more about why they enjoyed a book with their peers through Book Reviews and Blog. Students can enjoy reading through other students' recommendations to help them discover new favourite reads, creating a community of readers.

Enhance your library experience with our partner solutions

OverDrive eBooks

OverDrive Education
